Moreover, companies have sold off many of their smaller, less-profitable hospitals and have completed painful restructurings .

Figure 1 illustrates a dependency parse tree for the sentence "Moreover, companies have sold off many of their smaller, less-profitable hospitals and have completed painful restructurings." The tree structure shows the hierarchical relationships between words and phrases, with nodes labeled with dependency types (e.g., PREC, CONJ_member, PRE, AC'f_ap, AD, PAI_ap, AP, ESTB, CONJ_member, and PAI_ap). The root node is PREC, which branches into AC'f_ap and CONJ_member. AC'f_ap branches into PRE and AD. PRE branches into Moreover and companies. AD branches into have and sold. sold branches into PAI_ap, which branches into off and many. many branches into of, which branches into their and smaller. smaller branches into AP, which branches into less-profitable and hospitals. hospitals branches into ESTB, which branches into and. and branches into CONJ_member, which branches into have and completed. completed branches into PAI_ap, which branches into painful and restructurings.

Humana's revenues, for example, are being boosted by large increases in enrollments in the company's health maintenance organizations.

Figure 1: A diagram showing the structure of the word embeddings. The diagram illustrates how word embeddings are derived from different parts of a sentence. The sentence is: "Says cv-w2833f1 Todd Richter, an analyst with Dean Witter Reynolds : " The shakeout in the publicly traded companies is over . cv-w218f2". The diagram shows that the embedding for "Says" is derived from the word itself. The embedding for "cv-w2833f1" is derived from the word "cv-w2833f1". The embedding for "Todd" is derived from the word "Todd". The embedding for "Richter" is derived from the word "Richter". The embedding for "an" is derived from the word "an". The embedding for "analyst" is derived from the word "analyst". The embedding for "with" is derived from the word "with". The embedding for "Dean" is derived from the word "Dean". The embedding for "Witter" is derived from the word "Witter". The embedding for "Reynolds" is derived from the word "Reynolds". The embedding for ":" is derived from the word ":". The embedding for "\"" is derived from the word "\"". The embedding for "The" is derived from the word "The". The embedding for "shakeout" is derived from the word "shakeout". The embedding for "in" is derived from the word "in". The embedding for "the" is derived from the word "the". The embedding for "publicly" is derived from the word "publicly". The embedding for "traded" is derived from the word "traded". The embedding for "companies" is derived from the word "companies". The embedding for "is" is derived from the word "is". The embedding for "over" is derived from the word "over". The embedding for "." is derived from the word ".". The embedding for "cv-w218f2" is derived from the word "cv-w218f2".
