The tree shows the hierarchical structure of the sentence, with nodes labeled with part-of-speech tags and their corresponding word classes. The root node is S, which branches into NP (Noun Phrase) and VP (Verb Phrase). The NP branches into a series of NPs, each containing a noun and its associated word class. The VP branches into a series of VPs, each containing a verb and its associated word class. The tree is a complex structure, with many nodes and branches, illustrating the hierarchical organization of the sentence.

Figure 1: A parse tree for the sentence "The season is about 300 more than last year's end hires 2,000". The tree is a hierarchical structure showing the syntactic relationships between the words. The root node is S, which branches into NP (Noun Phrase) and VP (Verb Phrase). NP branches into the determiner "The" and the noun "season". VP branches into the auxiliary verb "is" and another VP. This second VP branches into the preposition "about" and a third VP. The third VP branches into the numeral "300" and a fourth VP. The fourth VP branches into the comparative word "more" and a fifth VP. The fifth VP branches into the conjunction "than" and a sixth VP. The sixth VP branches into the temporal phrase "last year's" and a seventh VP. The seventh VP branches into the noun "end" and an eighth VP. The eighth VP branches into the noun "hires" and a ninth VP. The ninth VP branches into the numeral "2,000". The words are written in a stylized font, and the tree structure is shown with lines and nodes.
